

WHAT IS REGLAZING?

Reglazing is the process by which porcelain, fiberglass, acrylics and ceramic surfaces are refinished. With Reglazing, your worn out bathtubs and tile can be restored to their original luster right in place - in just a few hours- at a fraction of replacement cost!!!

Over the years, thanks mainly to the use of harsh abrasive cleansers, your fixtures have probably lost their original look. In addition, the surface has actually become porous to the point of where keeping it clean is very difficult, if not impossible. Dirt and soap scum are caught and trapped in the roughened surface just like a sponge soaks up water. Maybe you have been the victim of someone who has dropped a heavy object and chipped or damaged the surface. Maybe the tub has been badly damaged by misuse of drain cleaners or other chemicals. Maybe your fixture has been severely stained by who knows what. Maybe your tile is showing its age and is crazing or discoloring or won't shine anymore. Maybe your countertop has been burned by a misplaced pot. Maybe the grout between your tile is looking old and hard to keep clean.

OR MAYBE, YOU JUST DON'T LIKE THE COLOR

Reglazing can correct all of these problems. Topkote Professionals can repair any chipped or damaged areas. They will then prepare the surface for reglazing using our industrial strength cleaning process. Next, we apply and cure our patented adhesive coating. Finally, our exclusive synthetic porcelain finish is applied and chemically bonded to the surface. The new surface is shining and easy to clean. There are no dangerous chemical residues or mess in your home. Grout lines are sealed and mildew growth is inhibited.

REGLAZE...

DON'T REPLACE YOUR TUB AND TILE...

Why replace that old bathtub, sink or tile just because their color is outdated or the surface is worn out? At a fraction of replacement cost we can make them look like new again, **IN ANY COLOR!!**
