

What is Bathtub Refinishing?

Many consumers have questions about refinishing; What is bathtub refinishing? What is reglazing? It is the same as bathtub resurfacing? What surfaces can refinishing be performed on? Can my bathtub be refinished? Can I change the color of my bathtub? Can my ceramic tile wall be refinished? What are the benefits of bathtub refinishing over replacement? Is a refinished bathtub better? What are the costs of refinishing my bathtub? What are the benefits of bathtub refinishing?

Basically, the kitchen and bath refinishing industry provides a durable, economical service to homeowners, hotel operators, and apartment complexes; the refinishing of bathtubs, tile, countertops, sinks and vanities, and major appliances. All of these things can become scratched, dull, or have outdated colors, yet still be structurally sound and working. Refinishing a bathtub, also known as reglazing, takes only a few hours, and imparts a brand new surface on the original bathtub, without removal. The result is a bathtub which has a brand new, shiny clean, durable, high gloss surface in any color the customer chooses. Bathtub refinishing allows customers to design any style bathroom in any color scheme, without having to choose colors based on the original bathtub, sink, or toilet color. Ceramic tile can be repaired and resurfaced as well, allowing for complete bathroom color changes in a matter of hours, without disrupting the walls, plumbing or electrical work inside of a bathroom. Bathtub refinishing can be performed on porcelain, fiberglass and acrylic.

Topkote Research Laboratories is the leading supplier of bathtub refinishing chemicals and supplies. It's refinishing products are known the world over, and they have been installed on millions of bathtubs, sinks, and tile walls all over the planet.
